AGILE Consortium

- AGILE consortium is composed by **two companies**:

allbesmart

- a Portuguese SME, established in 2015 that provides engineering services and technology expertise on IoT and Industry4.0

- a Portuguese SME, established in 2017 that manufactures industrial machines for the automotive cable assembly industry

AGILE Context

- Assembly of **electric cables** for the **automotive industry**:
 - is a process with significant **manual work**
 - most of the factories are located in cost-effective labour countries, mainly in north Africa, Mexico and India.

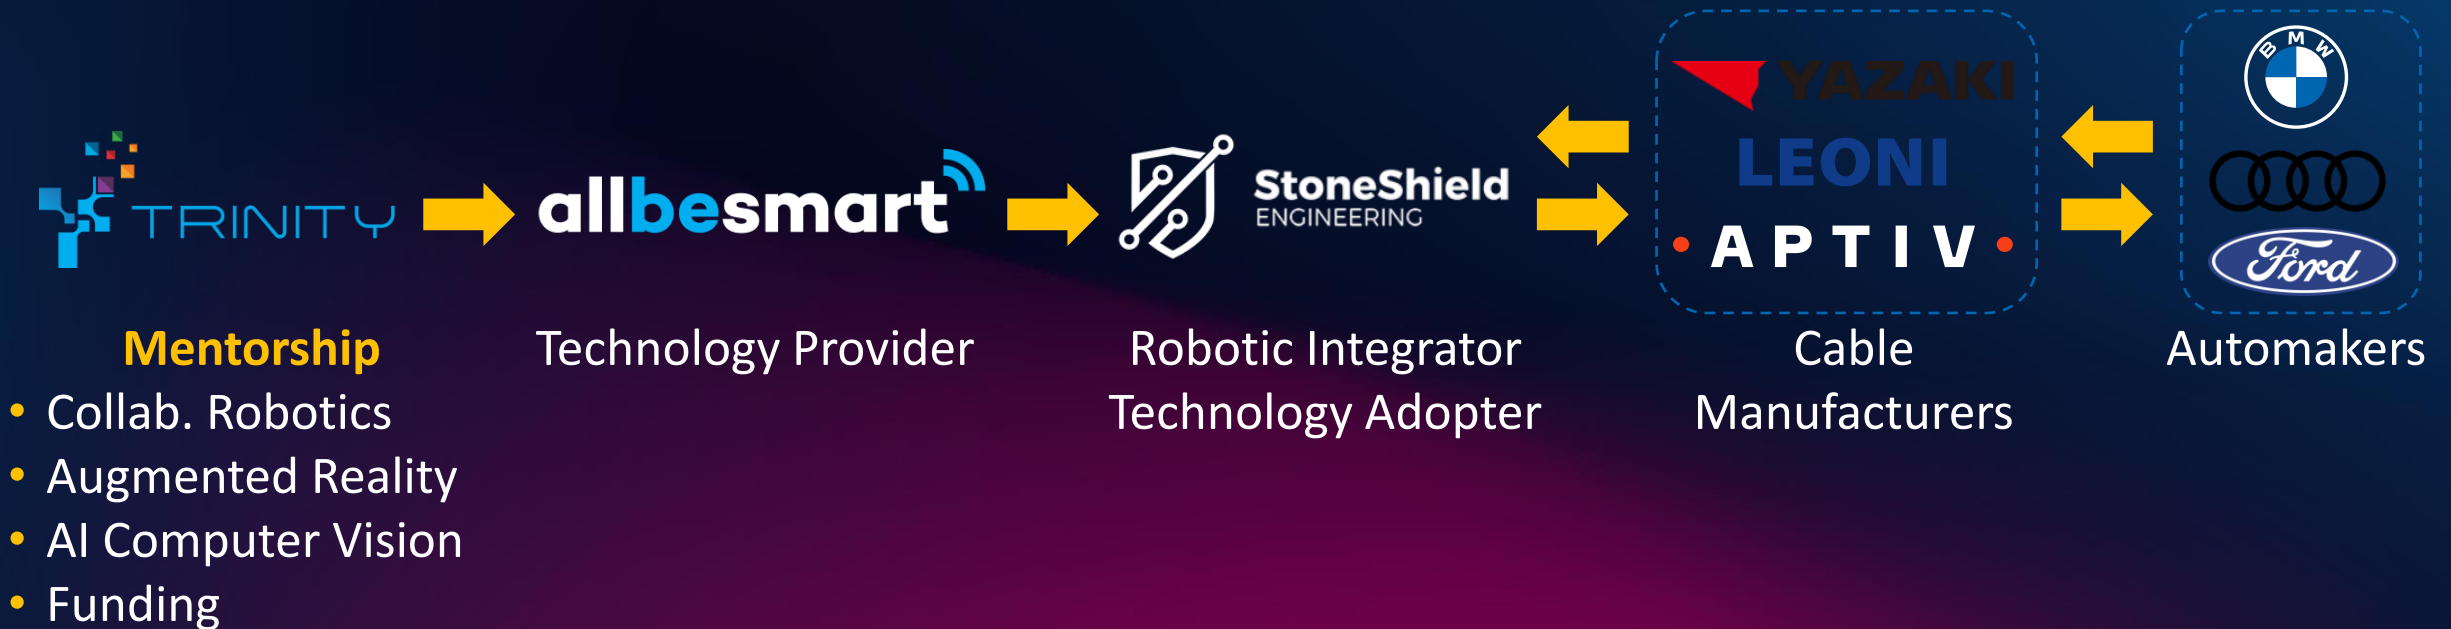

AGILE Context

- 90+ million vehicles are manufactured every year
- 60% of all electric cables manufactured are installed in cars
- Car manufacturers are using increasingly smaller components
- **Miniaturization raises new challenges for manual labour**
- Automation increases production, reduces costs, ensures quality
- **Automation requires training/education** and specialized maintenance operations

AGILE Position in the Automotive Value Chain

AGILE Demonstrators & TINY Use Cases

TRINITY Use case 1

Collaborative assembly with vision-based safety system.

DIH: Tampere University (Finland)

AGILE Demonstrator 1

Mentor: Morteza Dianatfar

TRINITY Use case 10

HRI framework for operator support in human robot collaborative operations.

DIH: LMS-University of Patras (Greece)

AGILE Demonstrator 2

Mentor: Manto Zoga

TRINITY Use case 17

Artificial Intelligence based stereo vision system for object detection, recognition, classification and pick-up by a robotic arm.

DIH: Institute of Electronics and Computer Science, Riga (Latvia)

AGILE Demonstrator 3

Mentor: Janis Arents

AGILE Demonstrator 1

AGILE Demonstrator-1: concept

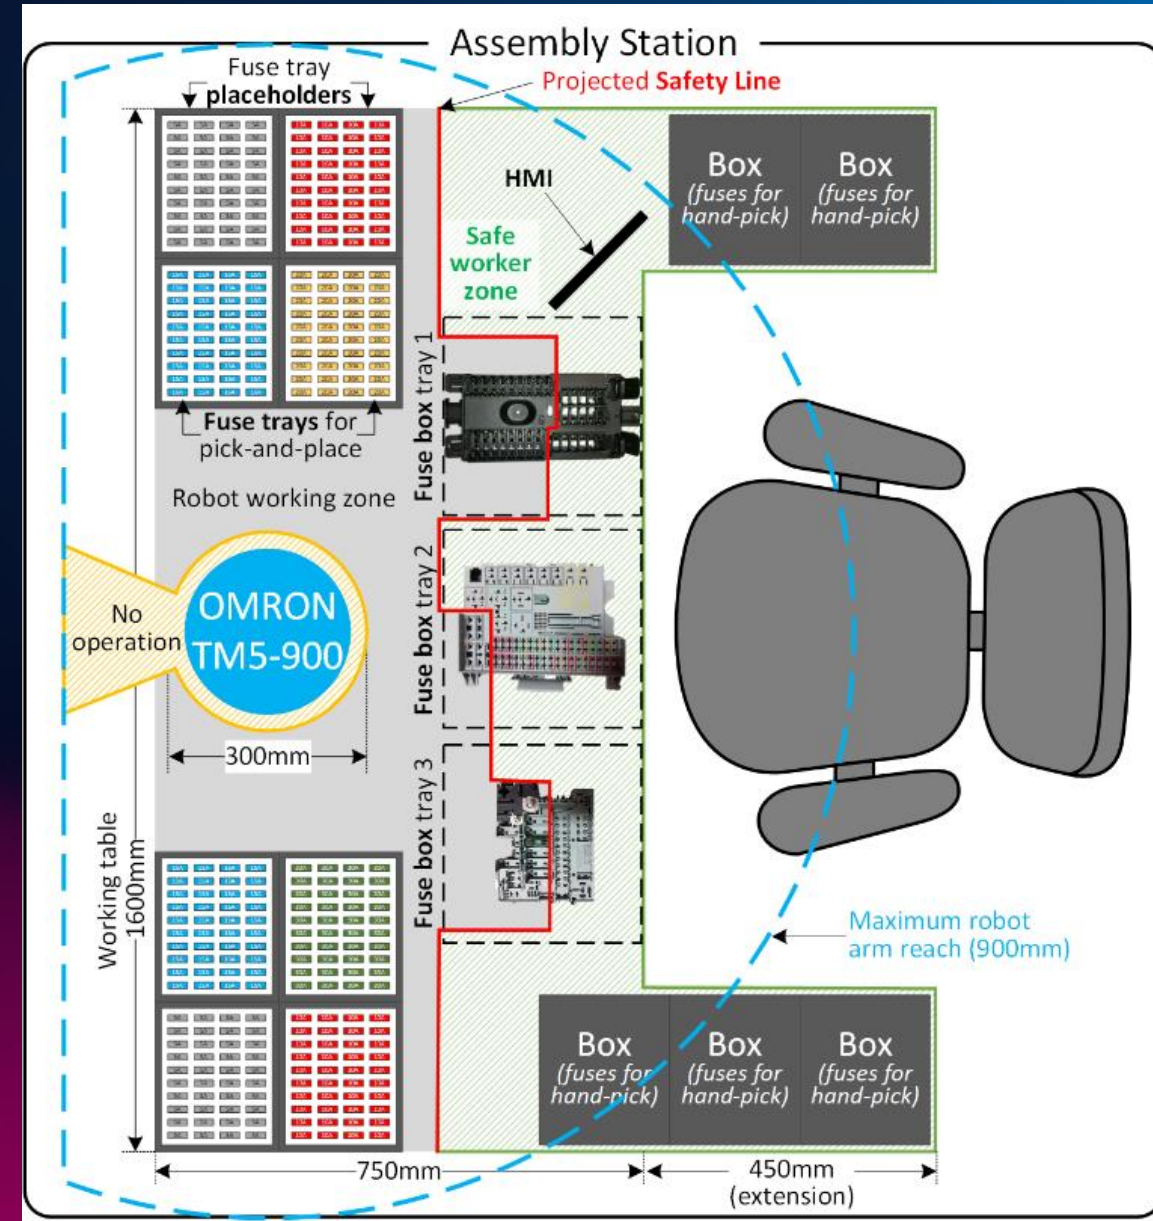

AGILE Demonstrator-1: high-level architecture

Fuse Boxes

AGILE Demonstrator 1

- **Main KPI:** reach 30% decrease in the cycle time of a fuse box assembly process. Current average assembly time is 6 minutes.
- **Secondary KPI:** Optimum trajectory planning, based on different robot configuration. The goal is to reach a linear as possible trajectory considering the assembly station layout.

AGILE Demonstrator 1

- Next steps
 - A new gripper has been designed and manufactured for this Demonstrator (not used yet)
 - Safety line feature not yet integrated

AGILE Demonstrator 3

AGILE Demonstrator-3 concept

Connectors for reuse

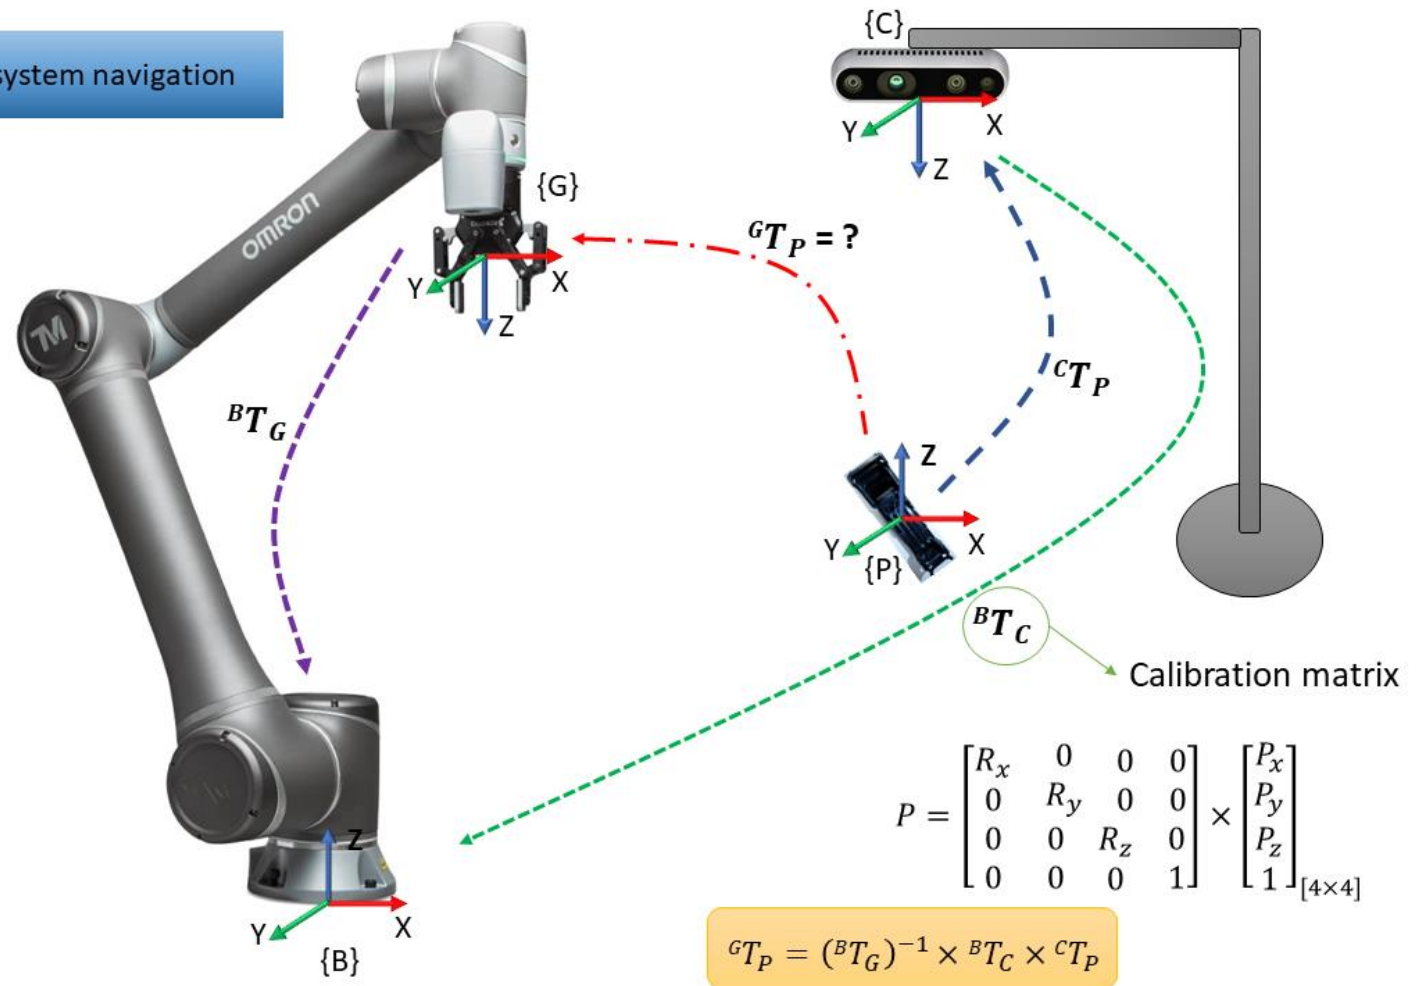

Main KPI: use AI to achieve an **average cycle time of 10 seconds** for a robotic arm to successfully pick-up small plastic cable connectors in unpredictable positions, sort them and place them in different boxes

AGILE Demonstrator 3

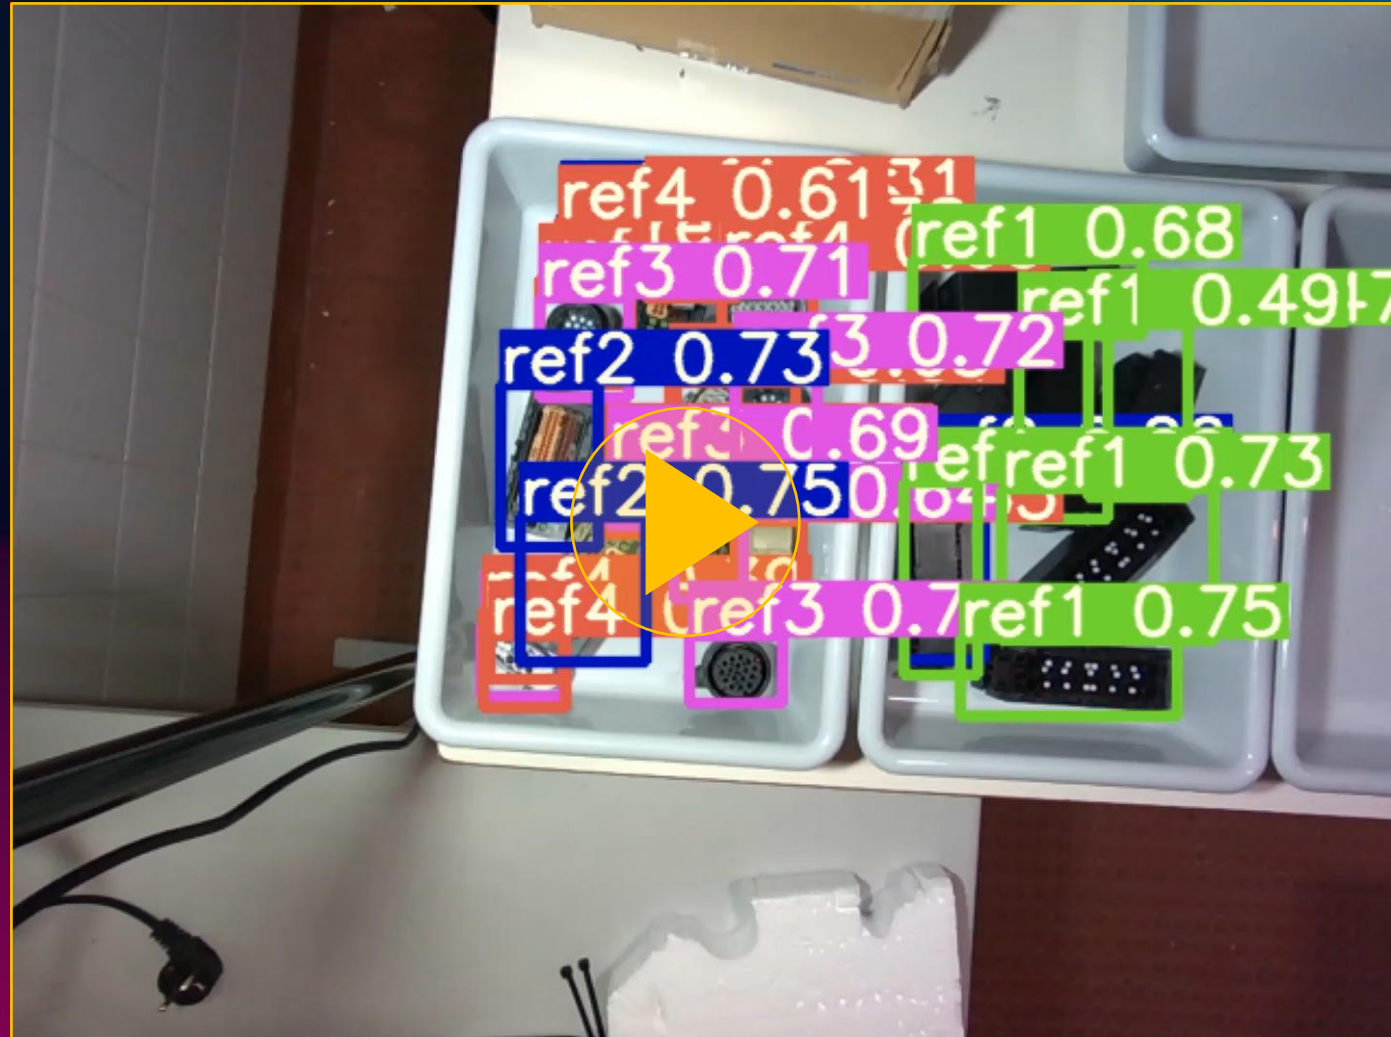

- Synchronizing different system coordinates

Eye to hand system navigation

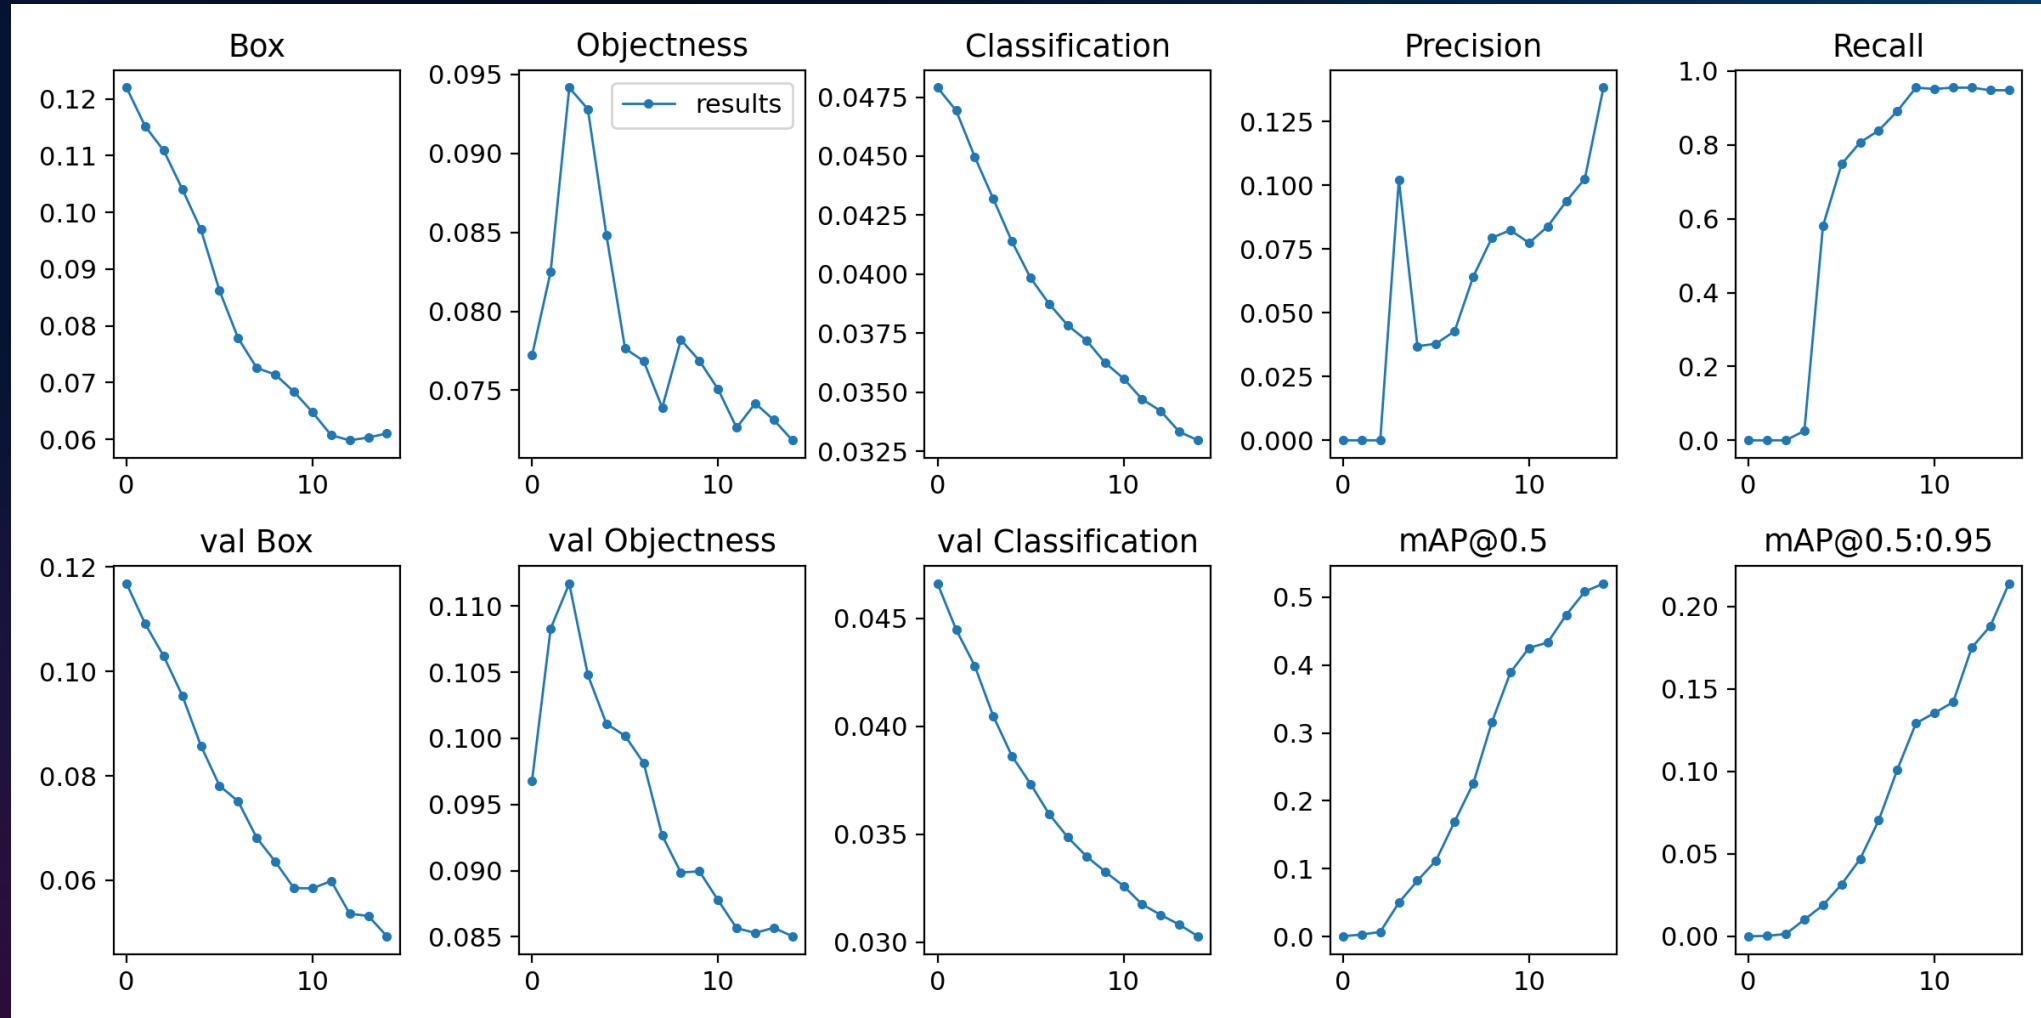

AGILE Demonstrator 3

- Object (connector) recognition and classification using:
 - Intel Real-Sense (3D vision / depth)
 - Robot arm camera (positioning)
 - YOLOv5 with Pytorch

AGILE Demonstrator 3

AGILE Demonstrator 3

- Next steps
 - Improve the speed of the robot
 - Improve recognition of object orientation

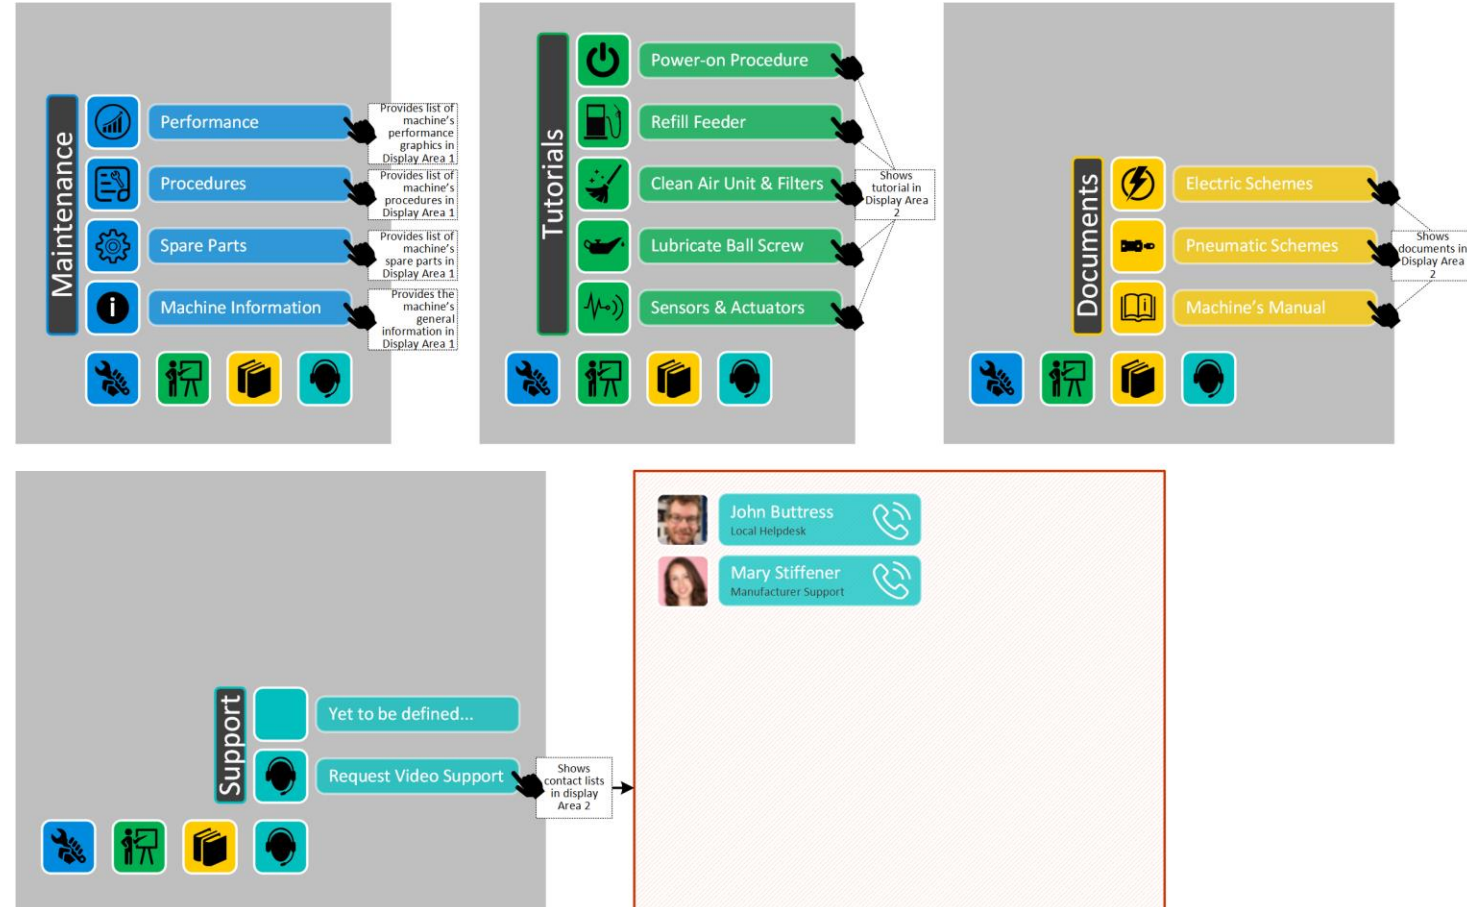

AGILE Demonstrator 2

HRI through Augmented Reality

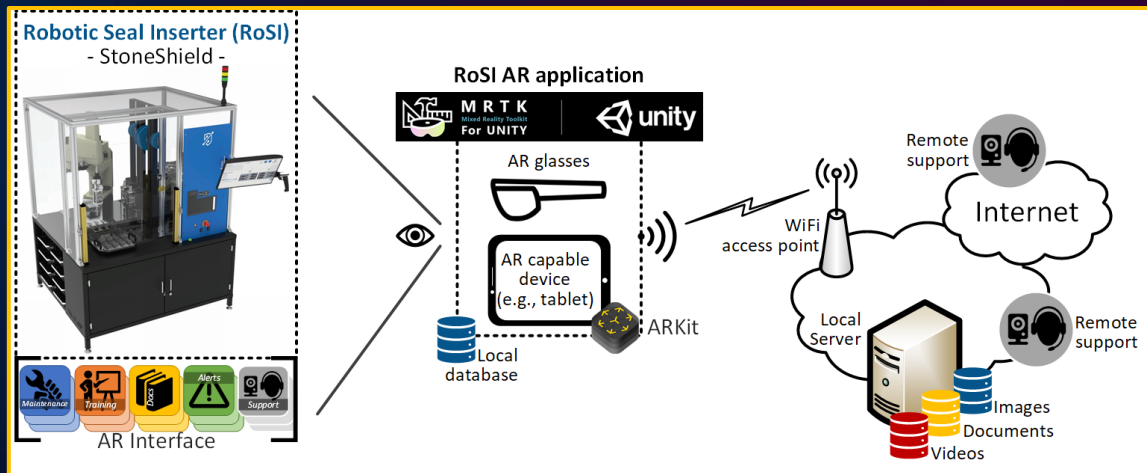

Navigation system – AR capabilities

AGILE Demonstrator 2

- Next steps
 - Complete the remote video support functionality

Final Remarks

- TRINITY has provided us with expertise in different domains:
 - **Inspiration for the Use cases**
 - 3 Use Cases have direct match with our interests
 - These are very well documented and facilitate adoption
 - **Valuable feedback in different areas**
 - Collaborative assembly with vision-based safety system
 - Human-Robot Interaction guidelines
 - AI and ML for object detection, recognition, classification and pick-up by a robotic arm
 - **Collaborative Publications** (upcoming)
